

1. all the source file are located in src/main/java/[package_name].
2. to run the service, run ___Application.java
3. the application.properties stores the properties required to run the service.

located as below: src/main/resources

The ONLY field u can modify in application.properties is the

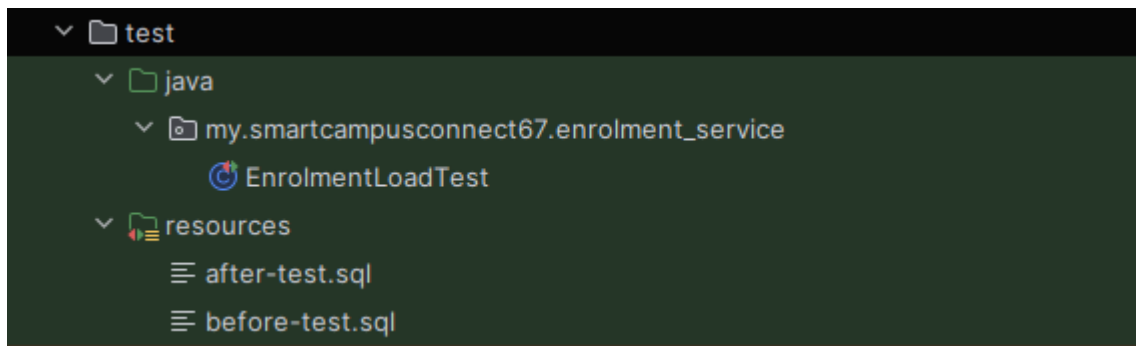

```
spring.datasource.url=jdbc:mysql://localhost:3306/db_course_enrolment
spring.datasource.username=root
spring.datasource.password=1234
```

Match the username, port and password to yours.

4. Each service has its own pom.xml. inside there are all the dependencies. DO NOT MODIFY that file.

5. Only enrolment-service has the load test. The loadtestApplication is located in /src/test/java/[packagename].

6. Both the sql required for the load test is in resources. Unless you know what you are doing, else don't modify the file.

7. To run load test, CLOSE THE ENROLMENT-SERVICE FIRST. Else it cannot run.

8. Database we use MySQL. Use MySQL workbench and MySQL connector.

9. If encounter port problems running the service, go task manager, details, search for the port: 8081, 8082, 8083, 8084, 8085, 9091(wsdl), 9090(tcp socket), then end that task.

10. DON'T CHANGE THE PORT NUMBER IN THE APPLICATION.PROPERTIES

11. To test using Postman, first RUN ALL SERVICES. Then only you can send requests.

12. If show dependencies error, sync the Maven Project. I dunno how to do that in eclipse.
